PARK-LOK INSTALLATION

The Park-Lok is a hydraulic parking lock device and is **NOT** an emergency brake. This product is not for use with silicone or silicone based brake fluids. Works on any vehicle or trailer with hydraulic brakes.

The Speedway Park-Lok must be installed in the brake line between the master cylinder and the wheels to be locked. The lower hole on the end of the Park-Lok is the inlet port (from the master cylinder) and the upper hole on the other end is the outlet port (to the wheels to be locked). Arrow on Park-Lok indicates direction of free flow. It should point away from the master cylinder.

Install the Park-Lok in your vehicle so it is easily reached. You may use the two holes drilled through the body for mounting purposes. The Park-Lok should be mounted solidly to prevent movement and to avoid damage to the brake line and fittings.

After installing the Park-Lok, bleed your brake system of all air in the lines. **DO NOT PUSH** down on the knob to help in the bleeding procedure.

To operate the Park-Lok, step on the foot brake, push down on the Park-Lok knob, let off the foot brake and it is locked. To release the Park-Lok, step on the foot brake and it opens automatically.

The Speedway Park-Lok is a hydraulic lock that uses the line pressure of the system to hold your brakes locked. **THE PARK-LOK WILL RELEASE AUTOMATICALLY WHEN THE PRESSURE IN THE LINE DROPS.** Check your system carefully for leaks or damage that could cause an unexpected release.

BRAKE INSTALLATION ALERT: The selection and installation of brake components should only be done by personnel experienced in the proper installation and operation of braking systems. The installer must use his/her own discretion to determine the suitability of the brake components and brake kits for every particular application.
