## ***E-Z Fill Instructions***

### ***"Saddle "A" Gas Tanks for Model A***

## **E-Z Install    E-Z Fill**

The E-Z Fill tanks bolt on with your running board brackets. After plumbing and wiring as per the instructions provided with your switchover valve:

- Bore a 1.5" diameter hole in your splash apron, being careful to line it up with the flapper door in the push-thru cap.
- Install the grommet and the billet cap plug. If the cap is a tight fit into the grommet, you can file out the apron hole to loosen it up.

- When filling your tank, simply pop out the E-Z cap and insert the pump- nozzle through your apron and the flapper-door in the push-thru cap.
- The flapper door is designed to minimize splash out, but it is not 100% sealed.
  - Do not fill your tank higher than the bottom of the cap.
  - Do not park uphill when the tanks are more than 3/4 full, as this will cause the level of fuel to rise above the flapper door and seep out.
