

Here's what others are saying about the Speedway Motors 9 Super 7® Hot Rod Carburetor:

We dyno tested the Speedway 9 Super 7® carburetor back-to-back with an original Stromberg 97 on a 355ci small-block Chevy. Both carburetors performed equally well, with comparable power. The 9 Super 7® delivered a slightly richer fuel mixture than the stock 97 - which is a good thing with today's poor quality pump gas. This is a smooth carburetor - it does everything right. I think it is a very good piece.

- **Earl Gaerte** - Race Engine Builder, Gaerte Engines

We tested the 9 Super 7® on Bob Everts' '32 Ford sedan delivery, which has a stock '36 Flathead V8 previously equipped with a Stromberg 97. We removed the Stromberg and installed the 9 Super 7®. We hit the starter and it fired up immediately on a cold, unstarted engine. It idled perfect with no adjustments or leaks. After a short drive, we shut the car off for a few minutes; it restarted immediately upon engaging the starter button. Overall driveability was excellent. Bob has kept the 9 Super 7 on his '32 and reports that it is still running great.
