**BOOM MAT****Boom Mat | Speaker Baffles**

Boom Mat Speaker Baffles are made from high-tech closed-cell polyethylene foam which encases the speaker to seal out dirt and moisture while providing a protective shell. They also maximize speaker performance by isolating the correct frequency responses while damping reverberation in the sheet metal and panel-to-frame resonance.

Forms water tight, protective shell for speakers from water and moisture intrusion that can potentially harm speaker cone, voice coil and electrical corrosion

- Closed-cell polyethylene enhances frequency response for improved sound clarity
- Easy conformability in tight spaces for a professional installation
- Thin material design offers less bulk for a clean and tight installation for professional finished appearance
- Available in sixteen (16) different sizes covering the most popular speaker sizes
- Isolates frequency responses and prevents sound from migrating to unfavorable areas in the vehicle such as door panels
- Serves as a protective barrier for speaker cone and voice coil against dirt and dust

- Damping properties help reduce distortion for enhanced acoustical response
- Closed-cell material forms a cushioned seal between speaker and mounting surface to isolate speakers from vehicle
- Acts as a protective guard for exposed speakers (example: speaker components visible in trunk area)
- Extends speaker lifespan and protects owner's speaker investment
