

1998 – 2002 GM F-Body LS Motor Mounts
P/N # 2328

The UMI P/N 2328 is a direct bolt-in component which replaces the factory steel-over-rubber engine mount on LS engines. The 2328 is designed and carefully manufactured to locate the engine in exact factory location. The top end of the bracket has an identification *notch* which goes toward the top of the engine.

1. In addition to the *NOTCH* designation, as a double check, the engine mount hole is offset by 0.236" (slightly under 1/4"). The short side should be toward the bottom.
2. Begin by installing the 2328's on the engine using the supplied bolts.
3. Double-check both passenger and driver mounts have the *notch* on the top side of the engine.
4. Torque the mounting bolts to 70 ft-lb.
5. Installation complete.
