Multi-Channel MSD Ignition Tester PN 8996

These instructions detail how to use the Multi-Channel tester with an MSD 6, 7, 8, 10, Digital 7 Series Ignition Control or Multi-function Controllers. If you need to test an MSD DIS Ignition, see pages 5 and 6.

WARNING: Do not connect directly to the coil or this unit will be damaged.

PARTS INCLUDED:

1 - Digital Ignition Tester

1 - Spark Tester

PROGRAMMING

The MSD Multi-Channel Ignition Tester has the ability to test several different combinations of ignition setups. By pushing the Red button on the face of the unit different programs can be selected. Figure 1 shows the different applications.

When you first connect power to the Tester, the LED will display the name and Part Number. You can bypass this information by pushing the Red button.

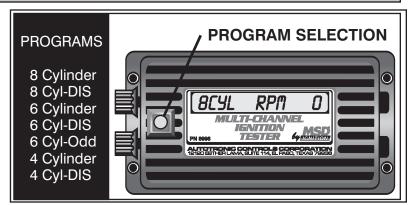

Figure 1 Ignition Tester Programs.

The Tester automatically defaults to the program for an 8-cylinder, single trigger ignition system. To select a different program just press the Red Select button until the program you need is displayed.

Note: If you have an MSD DIS Ignition Control, two test harnesses are offered to make testing each channel of the ignition easier. The DIS-4 Test Harness is PN 89964, the DIS-2 is PN 89962. These Harnesses will allow you to test the ignition and coils without having to splice into any wires. Figure 9 shows the harness.

WIRING

The Digital Tester has several wires with boots and alligator clips on each one. The wires with White boots are all trigger wires. Note: All of the wires are only used when testing a DIS-4 Ignition Control.

Red:	Connect to 12 volts.
Black:	Connect to a good ground source.
White:	This is the trigger wire used to test the points/amplifier (white wire trigger) circuit of an
	MSD Ignition. When testing DIS Ignitions, this is the Channel 1 trigger.
Green:	Channel 2 for a DIS Ignition.
Yellow:	Channel 3 for a DIS Ignition.
Violet:	Channel 4 for a DIS Ignition.
Green/Violet:	This 2-Pin connector is for testing the magnetic input circuit for MSD Ignitions. It plugs
	directly into the MSD's magnetic pickup connector. Violet is mag + and Green is mag
Lt. Blue/	This is a 2-pin connector for testing the cam sync pickup circuit of an MSD Programmable
Lt. Green:	Ignition or Multi-Function Controller. It plugs directly into the MSD Digital 7 Programmable
	Ignition's cam pickup connector. Lt. Blue is cam (+) and Lt. Green is cam (-). The CPC
	Ignition is supplied with a harness adapter.

RPM ADJUSTMENT

The MSD Digital Tester has two rpm adjustments; Coarse and Fine:

Coarse Adjustment: When this knob is turned clockwise the rpm will increase in 100 rpm increments. This allows a large spread of rpm to be covered in a short period of time.

Fine Adjustment: When this knob is turned clockwise the rpm will increase in 1 rpm increments for precise adjustments.

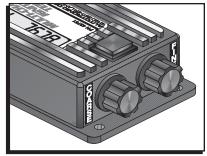

Figure 2 Adjusting the Tester's RPM.

INSTALLATION & USE

- 1. Be sure the ignition is Off.
- 2. Remove the coil wire from the distributor cap and install the MSD Test Plug. Connect the Plug to a ground source. Make sure the ground source is paint and corrosion free.

WARNING: A spark is going to jump across the tester's gap. Make sure there are no fuel sources or wiring near the tester.

- 4. Attach the Tester's Red wire to a 12 volt source such as the positive battery terminal.
- 5. Connect the Black wire to ground.
- 6. Connect the trigger wire(s) to fit your application. This will be the wire(s) with the White alligator clips or the 2-pin connector for magnetic pickups. See the following wiring diagrams in pages 2 4 for your application. **Note:** The 2-pin Mag-pickup, Violet/Green connector will <u>never</u> be used with the other trigger wires.
- 7. Make sure both the coarse and the fine adjustments on the tester are turned to the full counter clockwise position (zero).
- 8. Turn the ignition switch On and press the red button of the Tester until your appropriate engine combination is selected.
- 9. Increase the Coarse adjustment until you reach the desired rpm. Note that the test plug will be firing. The fine adjustment can be used to get the exact rpm you desire.

TESTING DIS IGNITIONS

WARNING: Do not connect directly to the coils or this unit will be damaged.

CAUTION: Do not connect more than one channel of the tester unless each spark plug wire is removed from the spark plug in the cylinders and placed close to ground. If left connected to the plugs, a spark will occur and could ignite any fuel in the cylinder resulting in a backfire through the intake.

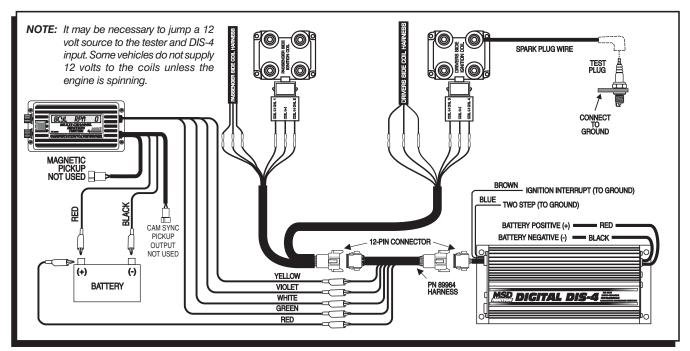

Figure 9 Testing an MSD DIS-4 Ignition Control using the PN 89964 Test Harness.

TIPS & TROUBLESHOOTING:

No spark after Tester is connected:

- Make sure the DIS Brown wire is NOT grounded.
- Check for 12 volts on the Tester's Red wire.
- Inspect the wiring of the tester. Make sure you have a good ground and 12 volt source.
- Check to make sure you have the correct testing program for your application.
- When testing a DIS system, if one coil doesn't spark, check the wiring and swap the trigger wire with a different one and test again. If the same coil still does not spark, the coil is at fault.

TECH NOTES

Service

In case of malfunction, this MSD component will be repaired free of charge according to the terms of the warranty. When returning MSD components for warranty service, **Proof of Purchase** must be supplied for verification. After the warranty period has expired, repair service is based on a minimum and maximum fee.

All returns must have a Return Material Authorization (RMA) number issued to them before being returned. To obtain an RMA number please contact MSD Customer Service at 1 (888) MSD-7859 or visit our website at www.msdperformance.com/rma to automatically obtain a number and shipping information.

When returning the unit for repair, leave all wires at the length in which you have them installed. Be sure to include a detailed account of any problems experienced, and what components and accessories are installed on the vehicle. The repaired unit will be returned as soon as possible using Ground shipping methods (ground shipping is covered by warranty). For more information, call MSD at (915) 855-7123. MSD technicians are available from 7:00 a.m. to 5:00 p.m. Monday - Friday (mountain time).

Limited Warranty

MSD warrants this product to be free from defects in material and workmanship under its intended normal use*, when properly installed and purchased from an authorized MSD dealer, for a period of one year from the date of the original purchase. This warranty is void for any products purchased through auction websites. If found to be defective as mentioned above, it will be repaired or replaced at the option of MSD. Any item that is covered under this warranty will be returned free of charge using Ground shipping methods.

This shall constitute the sole remedy of the purchaser and the sole liability of MSD. To the extent permitted by law, the foregoing is exclusive and in lieu of all other warranties or representation whether expressed or implied, including any implied warranty of merchantability or fitness. In no event shall MSD or its suppliers be liable for special or consequential damages.

*Intended normal use means that this item is being used as was originally intended and for the original application as sold by MSD. Any modifications to this item or if it is used on an application other than what MSD markets the product, the warranty will be void. It is the sole responsibility of the customer to determine that this item will work for the application they are intending. MSD will accept no liability for custom applications.
