HOW TO INSTALL YOUR NEW:
OIL FILTER ADAPTER / BYPASS ELIMINATOR

Thank you for your purchasing our product(s).
Important! Read all instructions before beginning installation. This is a FULL-FLOW oil filter adapter / bypass eliminator! An oil filter with an internal by-pass valve MUST BE USED!

With the engine cool to the touch, remove the oil filter. If applicable, remove the OE factory oil filter mount. Clean area of all debris, to ensure a clean mounting surface.

Coat the gasket, and o-ring, with new oil. Place the gasket (& o-ring) in place between the engine and the adapter. Attach adapter to the engine using the new bolts provided. Both 1/4" and 5/16" bolts are provided. Install the adapter with the bolts that are correct for your engine. Tighten bolts securely until snug.

Apply a thin film of fresh oil to the gasket on a new oil filter, and install onto the filter adapter. Tighten by hand 1/4 to 1/2 turn past O-ring contact with sealing surface.
