** BEFORE BEGINNING INSTALLATION OPEN ALL PACKAGES AND CHECK CONTENTS OF SHIPMENT. PLEASE REPORT ANY SHORTAGES DIRECTLY TO VINTAGE AIR WITHIN 15 DAYS. AFTER 15 DAYS, VINTAGE AIR WILL NOT BE RESPONSIBLE FOR MISSING OR DAMAGED ITEMS.

1. 1 762169 GEN IV 4 VENT w/ 2 & 2 ½ EVAP. SUB CASE
2. 1 784171 1970-72 CHEVELLE w/o AC ACC. KIT

NOTE: IMAGES MAY NOT DEPICT ACTUAL PARTS AND QUANTITIES. REFER TO PACKING LIST FOR ACTUAL PARTS AND QUANTITIES.
Important Notice—Please Read

For Maximum System Performance, Vintage Air Recommends the Following:

Heater Hose (Not Included With This Kit):
Heater hose may be purchased from Vintage Air (Part# 31800-VUD) or your local parts retailer. Routing and required length will vary based on installer preference.

Bolts Passing Through Cowl and/or Firewall:
To ensure a watertight seal between the passenger compartment and the vehicle exterior, for all bolts passing through the cowl and/or firewall, Vintage Air recommends coating the threads with silicone prior to installation.

Safety Switches:
Your Vintage Air system is equipped with a binary pressure safety switch. A binary switch disengages the compressor clutch in cases of extreme low pressure conditions (Refrigerant Loss) or excessively high head pressure (406 PSI) to prevent compressor damage or hose rupture. A trinary switch combines Hi/Lo pressure protection with an electric fan operation signal at 254 PSI, and should be substituted for use with electric fans. Compressor safety switches are extremely important since an A/C system relies on refrigerant to circulate lubricant.

Service Info:
Attention: The following system components are capped: Compressor, evaporator, condenser & drier. Caps may be under pressure with dry nitrogen. Be careful removing caps. Do not remove caps prior to installation. Removing caps prior to installation will cause components to collect moisture and lead to premature failure and reduced performance.

Evacuate the system for 35-45 minutes with system components (Drier, compressor, evaporator and condenser) at a temperature of at least 85° F. On a cool day, the components can be heated with a heat gun OR by running the engine with the heater on before evacuating. Leak check and charge to specifications.

Vintage Air Systems Are Designed to Operate With R134a Refrigerant Only! Use of Any Other Refrigerants Is a Fire Hazard and Could Damage Either Your Air Conditioning System or Your Vehicle.

Use of Any Other Refrigerants Will Void All Warranties of the Air Conditioning System and Components. Use of the Proper Type and Amount of Refrigerant Is Critical to Proper System Operation. Vintage Air Recommends Our Systems Be Charged By Weight With a Quality Charging Station or Scale.

Refrigerant Capacity for Vintage Air Systems:
(For other systems, consult manufacturer’s guidelines)

R134a System
Charge with 1.8 lbs. (1 lb., 12 oz.) of refrigerant.

Lubricant Capacities:
New Vintage Air-supplied Sanden Compressor: No additional oil needed (Compressor is shipped with proper oil charge).
All Other Compressors: Consult manufacturer (Some compressors are shipped dry and will need oil added).
Important Wiring Notice—Please Read

Some Vehicles May Have Had Some or All of Their Radio Interference Capacitors Removed. There Should Be a Capacitor Found At Each of the Following Locations:

1. On the positive terminal of the ignition coil.
2. If there is a generator, on the armature terminal of the generator.
3. If there is a generator, on the battery terminal of the voltage regulator.

Most alternators have a capacitor installed internally to eliminate what is called “whining” as the engine is revved. If whining is heard in the radio, or just to be extra cautious, a radio interference capacitor can be added to the battery terminal of the alternator.

It is also important that the battery lead is in good shape and that the ground leads are not compromised. There should be a heavy ground from the battery to the engine block, and additional grounds to the body and chassis.

If these precautions are not observed, it is possible for voltage spikes to be present on the battery leads. These spikes come from ignition systems, charging systems, and from switching some of the vehicle’s other systems on and off. Modern computer-operated equipment can be sensitive to voltage spikes on the power leads, which can cause unexpected resets, strange behavior, and/or permanent damage.

Vintage Air strives to harden our products against these types of electrical noise, but there is a point where a vehicle’s electrical system can be degraded so much that nothing can help.

Radio interference capacitors should be available at most auto and truck parts suppliers. They typically are cylindrical in shape, a little over an inch long, a little over a half inch in diameter, and they have a single lead coming from one end of the cylinder with a terminal on the end of the wire, as well as a mounting clip which is screwed into a good ground on the vehicle. The specific value of the capacitance is not too significant in comparison to ignition capacitors that are matched with the coil to reduce pitting of the points.

- Care must be taken, when installing the compressor lead, not to short it to ground. The compressor lead must not be connected to a condenser fan or to any other auxiliary device. Shorting to ground or connecting to a condenser fan or any other auxiliary device may damage wiring, the compressor relay, and/or cause a malfunction.

- When installing ground leads on Gen IV systems, the blower control ground and ECU ground must be connected directly to the negative battery post.

- For proper system operation, the heater control valve must be connected to the ECU. 
ENGINE COMPARTMENT

**REMOVE THE FOLLOWING**

- Battery, Battery Tray (Retain)
- Drain Radiator
- To remove the blower assembly (under hood) and the air distribution system (under dash) the factory manual indicates doing the following, **remove right inner fender**.
- OEM heater hoses (discard). See Figure 1.
- OEM heater wiring/vacuum harness molded grommet. See Figure 1.

**CONDENSER ASSEMBLY & INSTALLATION**

- Refer to separate instructions included with the condenser kit to install the condenser.
- Binary switch installation (refer to condenser instructions)

**COMPRESSOR & BRACKETS**

- Refer to separate instructions included with the bracket kit to install the compressor bracket.

**PULLEYS**

- In most instances the belt lengths will remain the same.
PASSENGER COMPARTMENT

NOTE: REMOVAL OF DASHBOARD REQUIRED TO INSTALL THE EVAPORATOR. VINTAGE AIR RECOMMENDS THAT YOU UTILIZE THE FACTORY SERVICE MANUAL WHEN YOU DISASSEMBLE AND REASSEMBLE THE DASHBOARD.

REMOVE THE FOLLOWING:
- REMOVE THE DASH PAD BY REMOVING (6) OEM SCREWS (RETAIN), SEE FIGURE 2 BELOW.
- LOWER STEERING COLUMN. PROTECT STEERING COLUMN WITH A CLOTH.
- DISCONNECT ALL WIRE AND CABLES FROM INSTRUMENT PANEL SPEEDOMETER, CONTROL PANEL, AND RADIO.
- THE LOWER DASH BY REMOVING THE (8) BOLTS (RETAIN)
- ALL HOSE AND DUCTING FROM O.E.M LOUVERS AND ASTRO VENT DOOR, SEE FIGURE 2 BELOW
- O.E.M DEFROST DUCT ASSEMBLY BY REMOVING THE (4) SCREWS, SEE FIGURE 3 BELOW.
- O.E.M HEATER ASM SEE FIGURE 3 BELOW
- PASSENGER SIDE KICK PANEL/ FRESH AIR DOOR ASM AS SHOWN IN FIGURE 4 PAGE 8.

FIGURE 2

FIGURE 3
KICK PANEL MODIFICATION

- REMOVE KICK PANEL GRILLE. (DISCARD) REMOVE KICK PANEL BY REMOVING (5) OEM SCREWS FROM THE FRESH AIR DOOR ASM. DISCONNECT AND DISCARD PULL CABLE ASSEMBLIES FROM THE KICK PANEL. SEE FIGURE 4 BELOW.

- INSTALL 1/2 PLASTIC PLUGS TO FILL THE HOLES LEFT FROM THE REMOVAL OF THE PULL CABLE ASM. SEE FIGURE 5 BELOW.
- CUT FRESH AIR DOOR ASM. AS SHOWN IN FIGURE 5 BELOW.
- USE TEMPLATE PROVIDED ON PAGE 24.
- PLACE TEMPLATE ON KICK PANEL AS SHOWN IN FIGURE 5a.
- REINSTALL KICK PANEL.

1. REMOVE KICK PANEL GRILLE. (DISCARD) REMOVE KICK PANEL BY REMOVING (5) OEM SCREWS FROM THE FRESH AIR DOOR ASM. DISCONNECT AND DISCARD PULL CABLE ASSEMBLIES FROM THE KICK PANEL. SEE FIGURE 4 BELOW.

2. INSTALL 1/2 PLASTIC PLUGS TO FILL THE HOLES LEFT FROM THE REMOVAL OF THE PULL CABLE ASM. SEE FIGURE 5 BELOW.
3. CUT FRESH AIR DOOR ASM. AS SHOWN IN FIGURE 5 BELOW.
4. USE TEMPLATE PROVIDED ON PAGE 24.
5. PLACE TEMPLATE ON KICK PANEL AS SHOWN IN FIGURE 5a.
6. REINSTALL KICK PANEL.

FIGURE 4

FIGURE 5a

- TEMPLATE
- CUT THIS SECTION OUT
- CUT OUT
DEFROST DUCT INSTALLATION

- Install defrost ducts under dash as shown in Figure 6 below. Secure using OEM screws.
- Install astro vent cap as shown in Figure 6 below.

(OPTIONAL) HOSE ADAPTER INSTALLATION - IF EQUIPPED

- Install S-clips on hose adapters as shown in Figure 7 below.
- Install driver & passenger side hose adapter inside OEM louvers. See Figure 7 below.
FRESH AIR COVER INSTALLATION

- Install (4) grommets in fresh air cap. See Figure 8 below.
- Apply a 1/4" bead of silicone around the back side of the fresh air cap as shown in Figure 8 below.
- Attach fresh air cap to firewall using a 1/4-20 x 1 1/2" bolt and washer, see Figure 8 below. (Note: fresh air cap installs on engine side of firewall.)

KICK PANEL FRESH AIR CAP INSTALLATION

- Install (4) grommets in kick panel fresh air cap, see Figure 9a below.
- Route A/C and heater hose through fresh air cap and kick panel fresh air cap as shown in Figure 9 and 9b, below.
- Apply a 1/4" bead of silicone around the back side of kick panel fresh air cap as shown in Figure 9a, below.
- Secure kick panel fresh air cap using (5) #8 x 1 1/4 ph pan head screws, as shown in Figure 9b below.
FIREWALL COVER INSTALLATION

- Apply a 1/4" bead of silicone around the back side of the firewall cover as shown in Figure 10, below.

- From inside the car, install firewall cover on firewall using (3) 1/4-20 x 1” hex bolts, flat washers and 1/4-20 nut with star washer, see Figure 10, below.

EVAPORATOR INSTALLATION

- On a work bench install (2) heater fittings with properly lubricated O-rings. (See Figure 18 page 15, and Figure 12 page 12.)

- Install (2) 1/4-20 x 1” hex bolt and 1/4 push nut bolt retainer on evap rear brkt as shown in Figure 12, page 12.

- Install evaporator front & rear mounting brackets on evaporator using (5) 1/4-20 x 1/2” hex bolts and tighten as shown in Figure 11 below & Figure 12, page 12.

- Lay evaporator subcase on passenger side floor board. Install A/C & heater hose on evaporator as shown in Figure 13, page 13 and hose installation on page 15.

- (Note: wrap the #10 fitting connections with press tape. See Figure 13, page 13.)
(2) HEATER FITTINGS

HEX BOLT

FIGURE 12

REAR EVAPORATOR BRACKET 655000-VUB

(2) 1/4-20 x 1/2”
HEX BOLT
LIFT EVAPORATOR UNIT UP UNDER THE DASHBOARD. SECURE LOOSELY TO THE FIREWALL FROM THE ENGINE COMPARTMENT SIDE USING (2) 1/4-20 NUT AND FLAT WASHER, SEE FIGURE 14.

- SECURE THE FRONT EVAPORATOR MOUNTING BRACKET BETWEEN THE DASH BRACKET AND COWL BRACKET USING OEM SCREW. SEE FIGURE 14a.

- VERIFY THAT EVAPORATOR UNIT IS LEVEL AND SQUARE TO THE DASH, THEN TIGHTEN ALL MOUNTING BOLTS. (NOTE: TIGHTEN THE BOLT ON FIREWALL FIRST, THEN THE FRONT MOUNTING BRACKET OEM BOLT.)

- ONCE EVAPORATOR IS IN PLACE. ROUTE A/C & HEATER HOSE OUT KICK PANEL FRESH AIR CAP AND THROUGH FRESH AIR CAP.

FIGURE 13

FIGURE 14

FIGURE 14a
70-72 CHEVELLE w/o AC w/o ASTRO VENTS

- INSTALL LOUVER HOUSINGS UNDER DASH AS SHOWN IN FIGURE 15 BELOW.

- INSTALL LOUVERS IN HOUSING, SEE FIGURE 15 BELOW.

70-72 CHEVELLE w/o AC w/ ASTRO VENTS

- INSTALL CENTER LOUVER UNDER DASH AS SHOWN IN FIGURE 16 BELOW

- FOR ASTRO VENT HOSE ADAPTER INSTALLATION REFER TO PAGE 9.
**1970-72 CHEVELLE w/o AC**

**DRAIN HOSE INSTALLATION**

- Locate evaporator drain on bottom of evaporator case.
- In-line with drain, lightly make a mark on the firewall measure 1" down and 2 1/2" to the left and drill a 5/8" hole through the firewall. See Figure 17 below.
- Install drain hose to bottom of evaporator unit and route through firewall. See Figure 17.

**LUBRICATING O-RINGS**

For a proper seal of fittings: install supplied O-rings as shown and lubricate with supplied oil.

**A/C HOSE INSTALLATION**

**STANDARD HOSE KIT**

- Locate the #8 compressor A/C hose. Lubricate (2) #8 O-rings (see Figure 18, above) and connect the 135° female fitting w/ 134a service port to the #8 discharge port on the compressor. Route the straight female fitting to the #8 condenser hardline coming through core support. See Figure 19, page 16. Tighten each fitting connection as shown in Figure 18 above.
- Locate the #10 compressor A/C hose. Lubricate (2) #10 O-rings (see Figure 18, above) and connect the #10 135° female fitting w/ 134a service port to the #10 suction port on the compressor. Route the 90° female fitting to the #10 evaporator. See Figure 13, page 13 and Figure 19, page 16. Tighten each fitting connection as shown in Figure 18 above.
- Locate the #6 evaporator A/C hose. Lubricate (2) #6 O-rings (see Figure 18, above) and connect the straight female fitting to the #6 hardline coming through the core support from drier. Route the 90° female fitting to the #6 evaporator. See Figure 13, page 13 and Figure 19, page 16. Tighten each fitting connection as shown in Figure 18, above.
- Use a #10 adel clamp to secure the #10 A/C hose to alternator brkt as shown in Figure 19, page 16. Secure the adel clamp to the alternator brkt using 10-32 x 1/2" ph pan head screws w/ nuts.

**MODIFIED A/C HOSE KIT**

- Refer to separate instructions included with modified hose kit.
HEATER HOSE & HEATER CONTROL VALVE INSTALLATION

- ROUTE A PIECE OF HEATER HOSE FROM THE WATER PUMP TO THE TOP HEATER FITTING OF HEATER CORE AS SHOWN IN FIGURE 13 PAGE 13 AND FIGURE 19 BELOW. SECURE USING HOSE CLAMPS.

- ROUTE A PIECE OF HEATER HOSE FROM THE INTAKE TO THE BOTTOM HEATER FITTING OF HEATER CORE AS SHOWN IN FIGURE 13 PAGE 13 AND FIGURE 19 BELOW. NOTE: INSTALL HEATER CONTROL VALVE IN-LINE WITH INTAKE MANIFOLD (PRESSURE SIDE) HEATER HOSE, SECURE USING HOSE CLAMPS AS SHOWN IN FIGURE 19, BELOW. NOTE: PROPER FLOW DIRECTION.
FINAL STEPS

- Install duct hoses as shown in Figure 22, page 18.
- Route A/C wires through 3/8" grommet as shown in Figure 20.
- (12 volt/ground/binary switch/heater valve).
- Install control panel asm.
- Plug the wiring harness in the ECU module on sub case as shown in Figure 22, page 18.
- (Wire according to wiring diagram on page 19 and 20.)

GLOVE BOX INSTALLATION

- Modify glove box as shown in Figure 21 below.
- Install (4) S-clips in glove box cap, see Figure 21a below.
- Install glove box cap. See Figure 21a below.
- Reinstall all previously removed items (battery tray, battery & inner fender)
- Fill radiator with at least a 50/50 mixture of approved antifreeze and distilled water. It is the owner’s responsibility to keep the freeze protection at the proper level for the climate in which the vehicle is operated. Failure to follow antifreeze recommendations will cause heater core to corrode prematurely and possibly burst in AC mode and/or freezing weather, voiding your warranty.
- Double check all fittings, brackets and belts for tightness.
- Vintage Air recommends that all AC systems be serviced by a certified automotive air conditioning technician.
- Evacuate the system for a minimum of 45 minutes prior to charging and leak check prior to servicing.
- Charge the system to the capacities stated on the information page (Page 4) of this instruction manual.
- See operation of controls procedures page 21.

PLUG FROM WIRING HARNESS 232001-VUR

FIGURE 22
**Dash Lamp** Is Used Only With Type 232007-VUR Harness.

**Warning:** Always Mount Circuit Breaker As Close to the Battery As Possible. (NOTE: Wire Between Battery and Circuit Breaker Is Unprotected and Should Be Carefully Routed to Avoid a Short Circuit).

**Wide Open Throttle Switch** Contacts Close Only at Full Throttle, Which Disables A/C Compressor.
**Warnung:**

Always mount circuit breaker as close to the battery as possible.

(Warning: wire between battery and circuit breaker is unprotected and should be carefully routed to avoid a short circuit.)

---

**Heater Control Valve:**

Install with servo motor facing down, as shown. Note flow direction arrow molded into valve body, and install accordingly.

**Binary/Trinary & Compressor:**

Binary: Connect as shown (typical compressor wiring). Be sure compressor body is grounded.

Trinary switch: Connect according to trinary switch wiring diagram.

**Circuit Breaker/Battery:**

White Must run to (-) battery. Red may run to (+) battery or starter. Mount circuit breaker as close to battery as possible.

---

**Ignition Switch:**

Violet 12V Ign Switch Source (key on accessory) position must be switched.

**Dash Light:**

Tan wire used only with vintage air supplied control panel with LED back light.
NOTE: WHEN BATTERY POWER IS FIRST CONNECTED TO THE ECU, THE COMPUTER GOES THROUGH AN INITIALIZATION SEQUENCE. THIS INITIALIZATION MAY TAKE UP TO 30 SECONDS. DURING INITIALIZATION THE BLOWER WILL NOT OPERATE, BUT THE DOORS INSIDE THE UNIT WILL BE OPERATING. A LOW BATTERY OR DISCONNECTING THE BATTERY MAY ALSO TRIGGER A-RE-INITIALIZATION. DURING START UP, A LOW BATTERY MAY DROP BELOW 7 VOLTS, TRIGGERING RE-INITIALIZATION.

OPERATION OF CONTROLS

A/C THERMOSTAT

IN DEF MODE SLIDE THE THERMOSTAT LEVER ALL THE WAY TO THE LEFT TO THE HOT POSITION, FOR MAXIMUM HEATING. BLUE AC INDICATOR LIGHT WILL COME ON ONLY WHEN AC COMPRESSOR IS ENGAGED (SLIDE LEVER LEFT OR RIGHT TO ADJUST DESIRED TEMPERATURE)

IN A/C MODE SLIDE THE THERMOSTAT LEVER ALL THE WAY RIGHT TO THE COLD POSITION, FOR MAXIMUM COOLING. BLUE AC INDICATOR LIGHT WILL COME ON ONLY WHEN AC COMPRESSOR IS ENGAGED (SLIDE LEVER LEFT OR RIGHT TO ADJUST DESIRED TEMPERATURE)
