**NOTE:** Images may not depict actual parts and quantities. Refer to packing list for actual parts and quantities.

---

**Before beginning installation, open all packages and check contents of shipment. Please report any shortages directly to Vintage Air within 15 days. After 15 days, Vintage Air will not be responsible for missing or damaged items.**

---

**Accessory Kit**

781072
Important Notice—Please Read

For Maximum System Performance, Vintage Air Recommends the Following:

Heater Hose (Not Included With This Kit):
Heater hose may be purchased from Vintage Air (Part# 31800-VUD) or your local parts retailer. Routing and required length will vary based on installer preference.

Bolts Passing Through Cowl and/or Firewall:
To ensure a watertight seal between the passenger compartment and the vehicle exterior, for all bolts passing through the cowl and/or firewall, Vintage Air recommends coating the threads with silicone prior to installation.

Safety Switches:
Your Vintage Air system is equipped with a binary pressure safety switch. A binary switch disengages the compressor clutch in cases of extreme low pressure conditions (Refrigerant Loss) or excessively high head pressure (406 PSI) to prevent compressor damage or hose rupture. A trinary switch combines Hi/Lo pressure protection with an electric fan operation signal at 254 PSI, and should be substituted for use with electric fans. Compressor safety switches are extremely important since an A/C system relies on refrigerant to circulate lubricant.

Service Info:
Attention: The following system components are capped: Compressor, evaporator, condenser & drier. Caps may be under pressure with dry nitrogen. Be careful removing caps. Do not remove caps prior to installation. Removing caps prior to installation will cause components to collect moisture and lead to premature failure and reduced performance.

Evacuate the system for 35-45 minutes with system components (Drier, compressor, evaporator and condenser) at a temperature of at least 85° F. On a cool day, the components can be heated with a heat gun OR by running the engine with the heater on before evacuating. Leak check and charge to specifications.

Vintage Air Systems Are Designed to Operate With R134a Refrigerant Only! Use of Any Other Refrigerants Is a Fire Hazard and Could Damage Either Your Air Conditioning System or Your Vehicle.

Use of Any Other Refrigerants Will Void All Warranties of the Air Conditioning System and Components. Use of the Proper Type and Amount of Refrigerant Is Critical to Proper System Operation. Vintage Air Recommends Our Systems Be Charged By Weight With a Quality Charging Station or Scale.

Refrigerant Capacity for Vintage Air Systems:
(For other systems, consult manufacturer’s guidelines)

**R134a System**
Charge with 1.8 lbs. (1 lb., 12 oz.) of refrigerant.

Lubricant Capacities:
New Vintage Air-supplied Sanden Compressor: No additional oil needed (Compressor is shipped with proper oil charge).
All Other Compressors: Consult manufacturer (Some compressors are shipped dry and will need oil added).
**Important Wiring Notice—Please Read**

Some Vehicles May Have Had Some or All of Their Radio Interference Capacitors Removed. There Should Be a Capacitor Found At Each of the Following Locations:

1. **On the positive terminal of the ignition coil.**
2. **If there is a generator, on the armature terminal of the generator.**
3. **If there is a generator, on the battery terminal of the voltage regulator.**

Most alternators have a capacitor installed internally to eliminate what is called “whining” as the engine is revved. If whining is heard in the radio, or just to be extra cautious, a radio interference capacitor can be added to the battery terminal of the alternator.

It is also important that the battery lead is in good shape and that the ground leads are not compromised. There should be a heavy ground from the battery to the engine block, and additional grounds to the body and chassis.

If these precautions are not observed, it is possible for voltage spikes to be present on the battery leads. These spikes come from ignition systems, charging systems, and from switching some of the vehicle’s other systems on and off. Modern computer-operated equipment can be sensitive to voltage spikes on the power leads, which can cause unexpected resets, strange behavior, and/or permanent damage.

Vintage Air strives to harden our products against these types of electrical noise, but there is a point where a vehicle’s electrical system can be degraded so much that nothing can help.

Radio interference capacitors should be available at most auto and truck parts suppliers. They typically are cylindrical in shape, a little over an inch long, a little over a half inch in diameter, and they have a single lead coming from one end of the cylinder with a terminal on the end of the wire, as well as a mounting clip which is screwed into a good ground on the vehicle. The specific value of the capacitance is not too significant in comparison to ignition capacitors that are matched with the coil to reduce pitting of the points.

- Care must be taken, when installing the compressor lead, not to short it to ground. The compressor lead must not be connected to a condenser fan or to any other auxiliary device. Shorting to ground or connecting to a condenser fan or any other auxiliary device may damage wiring, the compressor relay, and/or cause a malfunction.
- When installing ground leads on Gen IV systems, the blower control ground and ECU ground must be connected directly to the negative battery post.
- For proper system operation, the heater control valve must be connected to the ECU.
Engine Compartment Disassembly

NOTE: Before starting the installation, check the function of the vehicle (horn, lights, etc.) for proper operation, and study the instructions, illustrations, & diagrams.

Perform the Following:
1. Disconnect battery.
2. Remove battery (retain).
3. Drain radiator.
4. Remove OEM heater hoses (discard).
5. Remove OEM blower assembly (discard).
6. Remove OEM heater wiring (discard).
7. Remove front passenger side wheel.

Condenser Assembly and Installation

1. Refer to separate instructions included with the condenser kit to install the condenser.
2. Binary switch installation (Refer to condenser instructions).

Compressor and Brackets

1. Refer to separate instructions included with the bracket kit to install the compressor bracket.

Pulleys

1. In most instances, the belt lengths will remain the same.
Perform the Following:
1. Remove glove box (discard).
2. Disconnect all wires and cables from OEM control panel (discard).
3. Remove OEM control panel assembly (discard).
4. On all models except 1968 Dodge Chargers, remove center louver cover (discard).
5. Remove OEM duct hoses from defrost ducts (discard).
6. Remove passenger side OEM fresh air duct (discard).
7. Remove OEM heater assembly (discard).
8. Remove driver side fresh air duct pull cable assembly (discard).
9. Relocate passenger side fresh air duct pull cable to driver side fresh air duct.

1968 Dodge Coronet Shown

Remove Driver Side Fresh Air Duct Pull Cable (Discard)
Glove Box
Defrost Duct Hose
OEM Heater Assembly
Center Louver Cover
Remove Driver Side Fresh Air Duct Pull Cable (Discard)
Will Now Be Used to Operate Driver Side Fresh Air Duct

Figure 2

Figure 3
Defrost Duct Hose Adapter & Cowl Cover Installation

1. Install (2) S-clips onto defrost duct hose adapters (See Figure 4, below).
2. Install defrost duct hose adapters onto OEM driver and passenger side defrost ducts as shown in Figure 4, below.
3. Hold cowl cover under dash and mark the location of the (4) mounting holes.
4. Drill (4) 9/64” mounting holes under dash.
5. Apply a 1/4” bead of silicone around the back side of the cowl cover as shown in Figure 4, below.
6. Secure cowl cover to fresh air hole using (4) #10 x 1/2” sheet metal screws as shown in Figure 4, below.

Evaporator Bracket, Evaporator Hardline & Heater Hose Fitting Installation

1. On a workbench, install evaporator rear bracket and heater hose fittings with properly lubricated O-rings (See Figure 6, Page 9, and Figure 12, Page 13).
2. Install front mounting bracket onto evaporator using (2) 1/4-20 x 1/2” hex bolts, and tighten (See Figure 5, below).
Evaporator Bracket, Evaporator Hardline & Heater Hose Fitting Installation (Cont.)

(See Figure 12, Page 13)

Hold With This Wrench

(2) #10 O-rings

(2) Heater Fittings 121004

(2) 1/4-20 x 1/2" Hex Bolts
Firewall Cover Installation

1. If applicable, remove OEM wire clamp from firewall (See Figure 7, below), and ensure firewall surface is smooth.
2. Using firewall cover as a template, mark and drill (4) 3/8” holes in firewall (See Figure 7, below).
3. Apply a 1/4” bead of silicone around the back side of the firewall cover as shown in Figure 7, below.
4. From the engine compartment, install firewall cover onto firewall, and secure to firewall using (3) 1/4-20 x 3/4” hex bolts, (6) 1/4” flat washers and (3) 1/4” nuts w/ star washers as shown in Figure 7, below.

Figure 7

Firewall Modification

1. Drill (4) 1 ¼” holes in firewall using measurements in Figure 8, below.
2. Drill 5/8” hole in firewall (See Figure 8, below).
3. Install grommets in firewall (See Figure 8, below).

Figure 8
Evaporator Installation

NOTE: To ensure a watertight seal between the passenger compartment and the vehicle exterior, for all bolts passing through the firewall, Vintage Air recommends coating the threads with silicone prior to installation.

1. Install A/C and heater hoses (See Figure 9a, below).
2. Lift evaporator unit up under the dashboard. Secure loosely to firewall using (2) 1/4-20 x 1” hex bolts and flat washers (See Figure 9, below). **NOTE:** To ensure proper drainage, it is very important that the evaporator is level, both left-right and fore-aft. Check for level on the flat portions of the case around the drain.
3. Using front evaporator bracket as a guide, mark and drill (2) 3/16” holes in cowl (See Figure 9, below).
4. Using (2) #14 x 3/4” hex sheet metal screws, secure the front evaporator mounting bracket to the cowl (See Figure 9, below).
5. Verify that evaporator unit is level and square to the dash; then tighten all mounting bolts. **NOTE:** Tighten the bolt on the firewall first. Then tighten the front mounting bracket.

**Figure 9a**

NOTE: After installing #10 suction line, wrap all exposed metal (fittings & tube) with supplied press tape.

**Figure 9**

NOTE: To ensure a watertight seal between the passenger compartment and the vehicle exterior, for all bolts passing through the firewall, Vintage Air recommends coating the threads with silicone prior to installation.

NOTE: Coat bolt threads with silicone prior to installation.
1. Remove OEM caster/camber access panel from passenger side wheel well (discard) (See Figure 10, below).
2. Install (4) grommets in inner fender cap (See Figure 10a, below).
3. Install inner fender cap in wheel well side using (2) #10 x 1/2” sheet metal screws as shown in Figure 10a, below.
4. Install hardlines in inner fender cap as shown in Figure 10b, below.
5. Install Adel clamps onto hardlines as shown in Figure 10b, below.
6. Using Adel clamps as a guide, drill (5) 3/16” holes in inner fender. Secure Adel clamps and hardlines to inner fender using (5) 10-32 x 3/4” pan head screws and (5) 10-32 nuts with star washers as shown in Figure 10b, below.
**Drain Hose Installation**

1. Locate evaporator drain on bottom of evaporator case. In line with drain, measure 1” down and 2” to the left, and drill a 5/8” hole through the firewall (See Figure 11, below).
2. Install drain hose to outlet on bottom of evaporator unit, and route through the firewall.
3. Install 1/2” drain elbow onto drain hose.

![Figure 11](image)

**Lubricating O-rings**

For a proper seal of fittings: Install supplied O-rings as shown, and lubricate with supplied oil.

![Figure 12](image)

**A/C Hose Installation**

**Standard Hose Kit:**

1. Locate the #8 compressor A/C hose. Lubricate (2) #8 O-rings and connect the 90° female fitting to the #8 discharge port on the compressor. Then route the straight female fitting with R134a service port to the #8 condenser hardline coming over the core support. Tighten each fitting connection as shown in Figure 12, above.
2. Locate the #10 compressor A/C hose. Lubricate (2) #10 O-rings and connect the 45° fitting to the #10 suction port on the compressor. Route the 45° female fitting with R134a service port to the #10 hardline on the inner fender cap. Lubricate (2) #10 O-rings and connect the 90° female fitting in the wheel well to the #10 hardline on the inner fender cap. Then route the straight female fitting from the inner fender cap to the #10 fitting on the evaporator (See Figure 9a, Page 11, and Figure 13, Page 14). Tighten each fitting connection as shown in Figure 12, above.
3. Locate the #6 evaporator A/C hose. Lubricate (2) #6 O-rings and connect the straight female fitting to the #6 hardline coming over the core support from the drier. Route the straight female fitting to the #6 hardline on the inner fender cap. Lubricate (2) #6 O-rings and connect the 90° female fitting in the wheel well to the #6 hardline on the inner fender cap. Then route the 90° female fitting from the inner fender cap to the #6 fitting on the evaporator (See Figure 9a, Page 11, and Figure 13, Page 14). Tighten each fitting connection as shown in Figure 12, above.

**Modified Hose Kit:**

1. Refer to separate instructions included with modified hose kit.
1. In engine compartment, route a piece of heater hose from the water pump to the top heater fitting on the inner fender cap (See Figure 13, below). Secure using hose clamps.
2. In engine compartment, route a piece of heater hose from the intake to the bottom heater fitting on the inner fender cap (See Figure 13, below). Secure using hose clamps.
3. In wheel well, route a piece of heater hose from the top heater fitting on the inner fender cap to the top heater fitting of the heater core as shown in Figure 9a, Page 11, and Figure 13, below. Secure using hose clamps.
4. In wheel well, route a piece of heater hose from the bottom heater fitting on the inner fender cap to the bottom heater fitting of the heater core as shown in Figure 9a, Page 11, and Figure 13, below. Secure using hose clamps. **NOTE:** Install heater control valve in line with intake manifold (pressure side) heater hose, and secure using hose clamps as shown in Figure 13, below. Also note proper flow direction.
5. Apply a bead of silicone around each hose where it passes through the grommet on the firewall (See Figure 13, below).
Driver & Passenger Side
Under Dash Louver Installation

1. Place driver and passenger side louver housings under dash. Mark and drill (4) 9/64” holes as shown in Figures 14 & 14a, below.
2. Secure louver housings to dash using (4) #10 x 1/2” hex sheet metal screws as shown in Figures 14 & 14a, below.
3. Install louvers into housings as shown in Figures 14b & 14c, below.

<table>

</tbody>
</table>

Center Louver Installation

For 1968 Dodge Charger models:
1. Place center louver housing under dash. Mark and drill (2) 9/64” holes as shown in Figure 15, below.
2. Secure center louver housing to dash using (2) #10 x 1/2” hex sheet metal screws as shown in Figure 15, below.
3. Install louvers into center louver housing as shown in Figure 15, below.

For all other models:
1. Place center louver assembly into center louver opening in dash. Using housing as a guide, mark and drill a 3/16” hole through the dash as shown in Figure 15a, below.
2. Secure center louver housing to dash using OEM screw and a #8 x 1 ¾” pan head screw as shown in Figure 15a, below.
3. Install louvers into housing as shown in Figure 15a, below.

Final Steps

1. Install duct hoses as shown in Figure 18, Page 17.
2. Route A/C wires (12 volt/grounds/binary switch/heater valve) through 3/8” grommet (See Figure 16, below).
3. Install control panel assembly. Refer to control panel instructions.
4. Plug the wiring harnesses into the ECU module on the sub case (See Figure 18, Page 17). Wire according to wiring diagrams on Pages 18 and 19.
5. Install (4) #8 U-nuts on glove box, and install glove box in glove box compartment (See Figure 17, below).
6. Mark and drill (3) 7/64” holes through glove box into top of glove compartment and (1) 7/64” hole through glove box into each side of glove compartment, for a total of (5) holes (See Figure 17a, below).
7. Secure glove box in glove box compartment using OEM screws (See Figure 17a, below).
8. Install fuse box cover in glove box using (2) #8 x 1/2” pan head screws (See Figure 17b, below).
9. Reinstall glove box latch using OEM screws (See Figure 17b, below).
10. Reinstall all previously removed items.
11. Fill radiator with at least a 50/50 mixture of approved antifreeze and distilled water. It is the owner’s responsibility to keep the freeze protection at the proper level for the climate in which the vehicle is operated. Failure to follow antifreeze recommendations will cause heater core to corrode prematurely and possibly burst in A/C mode and/or freezing weather, voiding your warranty.
12. Double check all fittings, brackets and belts for tightness.
13. Vintage Air recommends that all A/C systems be serviced by a licensed automotive A/C technician.
14. Evacuate the system for a minimum of 45 minutes prior to charging, and perform a leak check prior to servicing.
15. Charge the system to the capacities stated on Page 4 of this instruction manual.

Warning: Always Mount Circuit Breaker As Close to the Battery As Possible. (NOTE: Wire Between Battery and Circuit Breaker Is Unprotected and Should Be Carefully Routed to Avoid a Short Circuit).

Wide Open Throttle Switch Contacts Close Only at Full Throttle, Which Disables A/C Compressor.
**Gen IV Wiring**

**Connection Instruction**

- **Circuit Breaker**: 30 AMP
  - Always mount circuit breaker as close to the battery as possible. (Note: Wire between battery and circuit breaker is unprotected and should be carefully routed to avoid a short circuit).

- **Battery**: White Must Run To (-) Battery. Red May Run To (+) Battery Or Starter. Mount Circuit Breaker As Close to Battery As Possible.

- **Ignition Switch**: Violet 12V Ign Switch Source (Key On Accessory) Position Must Be Switched.

- **Dash Light**: Tan Wire Used Only With Vintage Air Supplied Control Panel With LED Back Light.

- **Heater Control Valve**: Install With Servo Motor Facing Down, As Shown. Note Flow Direction Arrow Molded Into Valve Body, And Install Accordingly.

- **Binary/Trinary & Compressor**: Binary: Connect As Shown (Typical Compressor Wiring). Be Sure Compressor Body IsGrounded. Trinary Switch: Connect According To Trinary Switch Wiring Diagram.
Operation of Controls

On Gen IV systems with three lever/knob controls, the temperature control toggles between heat and A/C operations. To activate A/C, move the temperature lever/knob all the way to cold and then back it off to the desired vent temperature. For heat operation, move the temperature lever/knob all the way to hot and then adjust to the desired vent temperature. The blower will momentarily change speed, each time you toggle between operations, to indicate the change. **NOTE:** For proper control panel function, refer to control panel instructions for calibration procedure.

---

**Blower Speed**
- This lever/knob controls blower speed, from OFF to HI.

**Mode Control**
- This lever/knob controls the mode positions, from DASH to FLOOR to DEFROST, with a blend in between.

**Temperature Control**
- This lever/knob controls the temperature, from HOT to COLD.

---

**A/C Operation**

**Blower Speed**
- Adjust to desired speed.

**Mode Control**
- Adjust to desired mode position (DASH position recommended).

**Temperature Control**
- For A/C operation, adjust to coldest position to engage compressor (Adjust between HOT and COLD to reach desired temperature).

---

**Heat Operation**

**Blower Speed**
- Adjust to desired speed.

**Mode Control**
- Adjust to desired mode position (FLOOR position recommended).

**Temperature Control**
- For maximum heating, adjust to hottest position (Adjust between HOT and COLD to reach desired temperature).

---

**Defrost/De-fog Operation**

**Blower Speed**
- Adjust to desired speed.

**Mode Control**
- Adjust to DEFROST position for maximum defrost, or between FLOOR and DEFROST positions for a bi-level blend (Compressor is automatically engaged).

**Temperature Control**
- Adjust to desired temperature.

<td>When ignition is turned on, blower momentarily comes on, then shuts off. This occurs with the blower switch in the OFF position.</td>
<td></td>
<td>This is an indicator that the system has been reset. Be sure the red power wire is on the battery post, and not on a switched source. Also, if the system is pulled below 7V for even a split second, the system will reset.</td>
<td>Run red power wire directly to battery.</td>
