IGNITION POWER SUPPLY BOX

935-64000

©Speedway Motors, Inc. 2006

Orange Wire - To the switched side of your ignition or toggle switch. Install provided fuse holder in this wire with a 15 amp fuse.

Black Wire - To a good ground such as the engine block, chassis or negative post of the battery. If a good ground is not obtained, the supply box will still produce battery voltage.

Yellow Wire - To the normal 12 volt input terminal or wire on a MSD box or GM HEI distributor.

Caution - This ignition power supply box converts 10-14 volts DC @ 8 amps to a constant output of 17.5 - 17.7 volts DC and a maximum of 5.5 amps. If you are not using with a MSD ignition box or GM HEI type distributor, it is recommended you contact the ignition system manufacturer to verify the compatibility of their components with the increased voltage and amperage.
