

Alcohol Bladder Care

Prior to using your new SBI Bladder, there are some precautions to take into considerations:

- Wash your bladder with a mild soap and rinse it thoroughly with water
 - **DO NOT USE HOUSEHOLD CLEANING AGENTS**
- Mild discoloration will occur, but this will not affect the fuel or the fuel system - Discoloration will decrease the more the bladder is used
- Use 100% Alcohol fuel only, i.e. Methanol, Ethanol (**Not E-85**)
- Never use petroleum based additives, cleaners, or octane boosters; this will destroy an alcohol bladder
- Top Lube can be used when premixed in a 1 part solution to 220 part alcohol ratio (1 qt. solution to 55 gallons alcohol premixed)

To winterize your bladder we recommend to:

- Remove remaining fuel
- Wash your bladder with a mild soap and rinse it thoroughly with water
- Make sure the bladder is completely dry
- Close it up
- If possible, store in a climate controlled area
