

TRU-SQUARE

REAREND SQUARING MADE EASY

AVAILABLE FOR:

- **SPRINT**
- **MIDGET**
- **MICRO/MINI**

Attach TRU-SQUARE to the rear end and the chassis. The rear end is moved into position by adjusting the length of the TRU-SQUARE tools. Once the rear end is in position, TRU-SQUARE holds it in place while you time the birdcages and hook up the rod and torsion arms.

Not only will TRU-SQUARE save you time aligning your rear end; but, with the rear end firmly secured in position, you can also work on other parts of the car at the same time, without fear of knocking the rear end out of square.
